CURRENT
CAIRO · FOUNDER

Founder & CTO — iOS · Android · Backend · Web
Buraq — buraqegypt.com ⟡ · Buraq Technologies

Founded an Egyptian ride-hailing platform and have carried its **entire technical scope alone:** the brief, the set the standards, and built eleven repositories from empty — a hardened backend and operations console, rider and captain apps on **iOS and Android**, a shared core package for platform, and the public web app **live at buraqegypt.com**. Every layer governed by explicit rides/dispatch/wallet invariants, double-entry accounting, acyclic module boundaries, and a CI suite that gates the merge. Now preparing a cash-only beta launch in Cairo.

Backend API
NestJS · TypeScript · Mar '26 — now

Modular monolith, **22 modules** in an acyclic graph — **trip state machine, scored waterfall dispatch** over a Redis geo index, admin-tunable pricing across six ride tiers, **double-entry ledger** with cash and card settlement (Paymob, Fawry), scheduled and multi-stop rides, fee realtime **Socket.IO gateways**, OTP / Apple / Google auth with RBAC, idempotency and audit log · **330+ endpoints** over 66 controllers, 62 entities, **2,900+ tests**, lowest gate.

Ops Console
Next.js 14 · Jul '26 — now

29-screen ops surface — live **MapLibre** trips map with demand heatmap, dispatch and SOS boards, KYC review, finance reconciliation, refunds and payouts, cash control, map **zone editor**, feature flags, audit log. **Google SSO** · English and Arabic, 175+ tests.

iOS — Rider & Captain
SwiftUI · Swift 6 · Jul '26 — now

Two native SwiftUI apps on a shared **BuraqCore** package (domain · networking · design system, version-pinned) — the full **trip lifecycle** on live GPS, Socket.IO feeds with fresh-token reconnect, chat, wallet and payments, **Live Activities**, Siri voice booking, on-device ID verification, captain earnings and navigation · ~240 views, **1,500+ tests**, strict concurrency.

Android · Captain
Kotlin · Jetpack Compose · Aug '26 — now

Native port against **the same API contract** — 18 feature modules on convention plugins, Hilt, a pure-Kotlin domain; **navigation-driven**, the shift's foreground service and the trip end-to-end running against the backend · **1,500+ tests.**

Android · Rider
Kotlin · Jetpack Compose · Sep '26 — now

Screen-by-screen parity port of the iOS rider app — 11 feature modules on a published **buraq-core-android** GitHub Packages · **2,200+ tests**, including 271 screenshot goldens in light, dark and RTL.

Web · buraqegypt.com
Next.js 16 · React 19 · Oct '26 — now

Marketing site, **rider web app** with live trip tracking, **captain onboarding portal** with on-device document OCR, public trip-share pages and app links · English and Arabic (RTL), WCAG 2.2 AA · **1,800+ tests** · **live on Render since 15 Oct 2026.**

iOS · Buraq Schools
SwiftUI · Swift 6 · Nov '26 — now

A second product on the same platform: **one app for parents and school-bus supervisors** — the live bus, safe handovers, an offline trip mode and an **iOS 26 Liquid Glass** interface · **1,000+ tests**; the Android port is under way.

One backend · one contract · eight client surfaces — and the company around them. Interpretation, the Law 81/2018 licensure path, a private engine fitted to ADI observed fares, the business model and investor materials, the go-live plan — the product, one author — so I know exactly what I will be asking of the team I hire.
