# Ahmad Abdul-Jawad Mahmood

**Senior Software Engineer / Founder & CTO, Buraq**

> 12+ years shipping software — iOS · Android · backend · SaaS — Riyadh · open-source · 35K+ people

**12+** YEARS EXPERIENCE
**35K+** USERS REACHED
**99.8%** CRASH-FREE IN PROD
**10K+** STARS ACROSS REPOS

```
/**
 * Senior Software Engineer — 12+ years shipping production
 * software, native iOS first and now across Android, backend and web.
 * Apps used by 35K+ people. Hungerstation, Ego, and seven years on the
 * Mars POS (30k+ restaurants) — an offline-first CoreData core with cloud
 * sync to the rest of the system.
 * Since March 2020: Founder & CTO of Buraq (buraqsupport.com), a ride-hailing
 * platform
 * built to end to end, solo — ReactJS / PostgreSQL / Docker, a Next.js console, web,
 * iOS & Android.
 */
```

## how_i_engineer()

4 pillars

**2011 system design**

### Design for the failure case

An entire-year rise to Satisfi, Combine and async/await Without dwelling Mars POS delivery, and a performance programme that was timed the shift. A strict concurrency, actors and structured concurrency in new code.

- **Offline-first · idempotent · double-entry**

**2015 mobile as the product**

### Prioritise at every layer

Native iOS (Swift/UI) and Android (Kotlin / Compose) clients, shared backend core libraries; Node.JS / PostgreSQL / Docker, and Kubernetes. Android and the public web app. At Buraq I build and run every layer myself.

- **Offline-first · idempotent · double-entry**

**2017 payments and commerce**

### Design for the merge

Mars POS (Swift/UI) and Android (Kotlin / Compose) clients, shared backend core libraries; Node.JS / PostgreSQL / Docker, and Kubernetes. Android and the public web app. At Buraq I build and run every layer myself.

- **9 + 9 + 9 +
