Engineering leader with **12+ years** building and **8+ leading** — including **seven consecutive years** running the same 5+ engineer iOS team through a product's growth from launch to an enterprise POS serving 20k+ restaurants across Cairo. I grow engineers, protect the quality bar, and make delivery predictable: onboarding, mentoring, review culture, CI/CD, and honest estimates with structure and design. I stayed technical the whole time — I still architect, still review, and still ship. Currently I lead **Founder & CTO** at Buraq (buraqegypt.com), an Egyptian ride-hailing platform I built solo across backend, web, and iOS.

12+ YEARS IN ENGINEERING

8+ YEARS LEADING ENGINEERING TEAMS

7yrs CONSECUTIVE YEARS ON THE SAME iOS TEAM

20k+ RESTAURANTS SERVED BY THE POS I LED

§ 01 How I Run a Team

01 — People & Growth

Grow engineers, not just features

Seven years with one team: onboarding that gets a new engineer productive fast, mentoring and career conversations, and pairing on the problems that matter. **Retention through a seven-year product** is the result I am proudest of — the same people got better, together.

02 — Quality & Standards

Quality is a default, not a phase

Module boundaries, review culture, and automated testing that held an enterprise POS at **99.8–99.9% crash-free** — in production, on a performance programme that made the app **40% faster to load**.

03 — Delivery & Predictability

Estimates the team can keep

CI/CD and release automation built from nothing: **60% faster deployments** cycles, code that gets merged, and planning with product and design in commitments nobody has to walk back. Scope conversations happen before the sprint, not during it.

04 — Technical Excellence

I can still review any PR on my team

I lead technically as well as organisationally: I drove the multi-year Swift(UI) modernisation, event-driven migration, and at Buraq I build a ride-hailing platform that across a few months has owned, a Next.js console, the web app, and iOS and Android apps — 3,100+ commits, 16,000+ tests.

§ 02 Professional Experience

Aug 2019 – Aug 2026
Riyadh, KSA

iOS Team Lead — 7 years leading the iOS org

Mrsool · Jahez Group

- **Led a 6+ engineer iOS team** for seven years — onboarding, mentoring, career growth, and the review culture behind an enterprise POS used by 20k+ restaurants and cafés.
- **Owned the technical roadmap and architecture:** an offline-first CoreData core with cloud sync, built on a venue keeps trading when the network does not.
- **Set the engineering standards** — module boundaries, code review, automated testing — that held the app at a 99.8–99.9% crash-free rate in production.
- **Drove the multi-year migration** to SwiftUI, Combine and async/await without pausing feature delivery, and made the case for it to stakeholders.
- **Built CI/CD and the release process from scratch,** cutting deployment time 60% and shortening every engineer's feedback loop.
- **Ran the performance programme** (40% faster load times) and designed the table-management, ordering and payment-processing systems at the heart of the product.
- **Partnered with product, design and backend** leadership on scope, estimates and delivery commitments the team could keep.

Mar 2026 – Present
CURRENTLY
CAIRO · FOUNDER

Founder & CTO — iOS · Android · Backend · Web

Buraq — buraqegypt.com · Buraq Technologies

Founded an Egyptian ride-hailing platform and have started to **evolve technical scope** above. Owns the stack, the standards, and both store releases — from empty → a hardened backend and operations console, rider and captain apps on **iOS and Android**, a shared core package for platform, and the public website **live at buraqegypt.com**. Every layer governed by explicit rules: idempotent mutations, double-entry ledger, server-authoritative state, and a CI suite that gates the merge. Now preparing a cash-only beta in Cairo.

Backend API
Node.js · TypeScript · Mar 26 – now

Ops Console
Next.js 14 · Jun '26 – now

iOS · Rider & Captain
SwiftUI · both · Jul '26 – now

Web · buraqegypt.com
Next.js 14 · React 19 · Oct '26 – now

- Modular monolith, **22 modules** in an acyclic graph — **trip state machine, scored waterfall dispatch** over a fleet-wide geo-index, and a **double-entry ledger** with an append-only journal.
- **Server-authoritative** fare engine (Haversine, Egyptian Flat Fare), scheduled and multi-stop rides, fee realtime **locked-fee guarantee**, PCI-DSS-scoped auth with RBAC, idempotency and audit log · **330+ endpoints** over 66 controllers, 62 entities, **3,900+ tests**, boutique docs.
- **29-screen** ops surface — live **MapLibre** trips with dead-reckoned homing, dispatch and SOS boards, KYC review, finance reconciliation, refunds and payouts, cash control, real **zone editor**, fare tuning, logs, and **Google SSO** Original and Arabic, i18n-ready.
- Two native **SwiftUI** apps on a shared **BuraqCore** package (domain, networking, realtime, persistence, design system) — the full **trip lifecycle** on live GPS, SockJS/STOMP, with fresh-token reconnect, offline queue, and push-driven **Live Activities**. Siri voice booking, on-device ID verification, earnings, and driver navigation — 240 views, **1,800+ tests**, strict concurrency.
- Native port against the **same API contract** — 18 feature modules on ownership singletons, Hilt, a pure-Kotlin domain, orchestrating the shift's foreground service and the trip end-to-end running against the backend · **1,300+ tests**.
- Rider-only, **rider web app** with live trip tracking, **captain onboarding portal** with on-device document OCR, public trip-share pages and app links · English and Arabic (RTL), WCAG 2.2 AA, **1,800+ tests** · **live on Render since 19 Oct 2026.**

One backend · one contract · six client surfaces — and the company around them: incorporation, the law (#71908 licence path), a pricing engine fitted to ride absorption and fees, the business model, and investor material. The live plan, 3,100+ commits, one author — so I know exactly what I will be asking of the team I hire.

Dec 2025 – Jun 2026
VOLUNTEER

Senior iOS Engineer

NurseBuy · Volunteer Charity Project

- Designed an architecture integrating on-device machine learning for real-time content safety.
- Built a seamless communication layer between native iOS and web-based content.
- Implemented efficient image processing with background-based full-image blur effects.
- Created a real-time video monitoring system for continuous content filtering.
- Developed smart banner blocking and performance management throughout.

Mar 2018 – May 2019
Riyadh, KSA

iOS Team Lead

Mrsool — The Ride-Sharing App

- Led iOS delivery for a complete ride-hailing ecosystem (rider, driver, watchOS) serving 10M+ users in Saudi Arabia.
- Implemented real-time GPS tracking and navigation with MapKit and optimised route algorithms.
- Integrated Apple Pay, HyperPay, and push-notification infrastructure.
- Created seamless iPhone ↔ Apple Watch handoff for continuous ride tracking.
- Built the driver rating system and real-time fare calculation engine.

Sep 2016 – Mar 2018
KSA

Senior iOS Engineer

HungerStation — Deliverythere Group

- Contributed to a major food-delivery platform serving 20M+ users.
- Optimised app performance for high-volume transaction processing.
- Implemented real-time order tracking and delivery optimisation.
- Collaborated with backend teams on API design and integration.

May 2016 – Aug 2016
Remote

iOS Developer

ALAqaath

- Developed food-ordering apps with Firebase integration and real-time features.
- Implemented Spreedly payments and live-chat functionality.
- Built responsive UI with Auto Layout across multiple device sizes.

Jul 2015 – Sep 2015
Remote

iOS & Apple Watch Developer

Nile Design Co.

- Early adopter of Apple Watch development (watchOS 1–2).
- Built a foundation in iOS and watchOS app development.
- Adopted Swift 1 from WWDC 2014 onward.

May 2014 – May 2015
Remote

iOS Developer

UA Pro. Solutions Ltd.

- Foundation iOS experience in Objective-C and early Swift.
- Built social networks and e-commerce platforms.
- Learned core iOS principles and App Store deployment.

§ 03 Selected Projects

01 — Full-Stack

Buraq — Ride-Hailing (Founded Mar 2026)

NestJS · TypeScript · PostgreSQL · Redis · Socket.IO · Next.js · SwiftUI · MapLibre · Jetpack Compose

Egyptian ride-hailing platform I founded and built solo: a hardened NestJS backend (trip state machine, scored dispatch, double-entry ledger, fee realtime guarantees, 2,900+ tests), a 29-screen ops console, rider and captain apps on iOS and Android, and the public web app **live at buraqegypt.com**.

• Founder & CTO · Nine Repos · 3,100+ Tests

02 — Full-Stack

Egy — Ride Hailing

MapKit · Core Location · Apple Pay · Push · watchOS

Complete ride-hailing ecosystem: rider app, driver app, and Apple Watch companion. Real-time GPS, Apple Pay, and cross-device experiences for 10M+ users.

• 4.7 / 5 — 251.8K+ ratings

03 — Full-Stack

HaramBlur — Privacy Browser

SwiftUI · CoreML · MobileSAM · CoreImage · Vision

Privacy-focused iOS browser with on-device ML for powered content detection and filtering. On-device ML, smart blur effects, video monitoring.

• AI-Powered Privacy Browser

04 — Enterprise

Mrsool — iPad POS

SwiftUI · CoreData · CloudKit · Real-time Sync

Enterprise point-of-sale serving 20k+ restaurants and cafés — with offline-first CoreData architecture, complex table management, real-time order processing — **the product my iOS team owned for seven years.**

• 4.8 / 5 — 2,437 ratings

05 — Delivery

HungerStation

GCC1C · Firebase · Real-time APIs · Performance

Major food-delivery platform serving 20M+ users across Saudi Arabia and Middle East. Focused on performance and real-time order tracking.

• 4.5 / 5 — 1.9M+ ratings

06 — Community

Daleeda

MapKit · Core Location · Social SDKs · Community

Neighbourhood community app for users across the US — prayer times, mosque finder, and community features with enhanced location and social integration.

• 4.5 / 5 — 1,287 ratings

§ 04 Stack & Craft

ENGINEERING LEADERSHIP — ORG

Team Leadership · Technical Direction
Architecture Governance · Technical Roadmap
Mentoring & Career Growth · Onboarding
Code Review Culture · Estimation & Planning
Cross-Functional Partnership · Quality & Crash Budgets
Release Management · Agile / Scrum

FOUNDER — COMPANY

Company Formation · Pricing & Unit Economics
